**Menocheck**

**What is Menocheck ?**

**Why Menocheck ?**

**Interpretation of results**

**Clinical validation**

**First clinically validated blood test to be used as  
aid in determination of menopausal status**

1

First ever **FDA cleared** AMH blood test to determine the menopausal status in women

2

Next generation sensitive AMH test that provide **clinically relevant** interpretation during menopause

3

Predict the time to **Final menstrual period** which helps women for better personalized clinical management

1

Irregular menstrual patterns and Vaso Motor Symptoms during menopausal transition disrupts quality of life

52 yrs  
Natural  
Menopause

2

Early menopause and premature menopause increase the risk of osteoporosis and Cardio Vascular Diseases

45 yrs  
Early  
Menopause

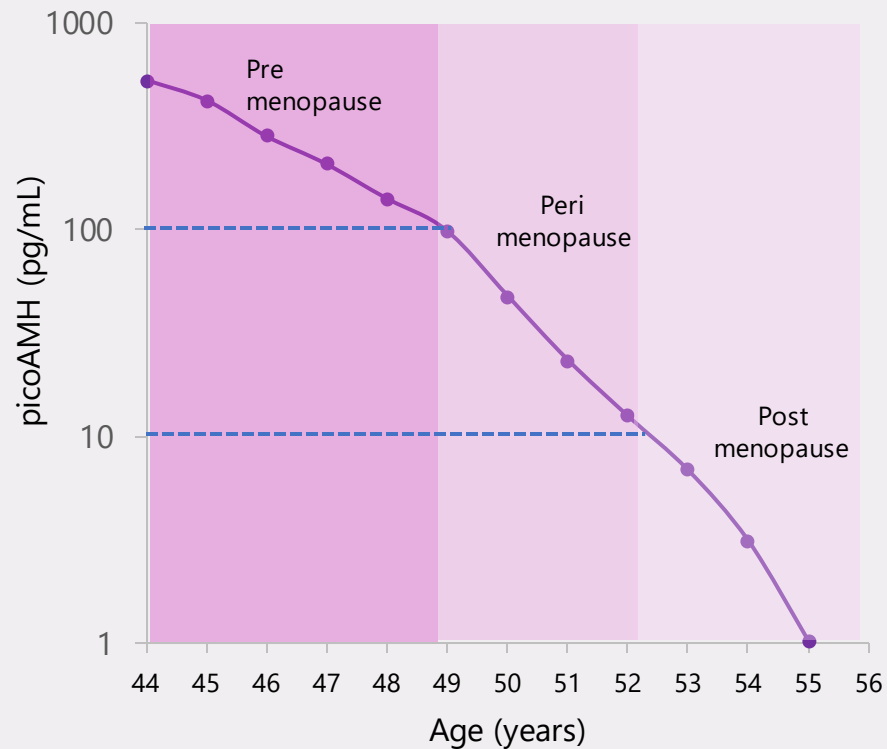

3

Menocheck facilitating communication between doctors and women for better management of menopause

40 yrs  
Premature  
Menopause

## Clinical Sensitivity does matter in determination of menopausal status and management

| Menopause category | Final menstrual period (FMP) | AMH concentration |
|--------------------|------------------------------|-------------------|
| Pre Menopause      | >5 yrs. From FMP             | >100 pg/mL        |
| Peri Menopause     | <5 yrs. From FMP             | 10-99.9 pg/mL     |
| Post Menopause     | At FMP or later              | <10 pg/mL         |

Clinically validated  
in longitudinal studies

**Predict  
the Trans menopausal  
Bone loss**  
Karlamañgla et al, 2016

**Predict  
the onset of Vaso  
Motor Symptoms**  
Crawford et al, 2016

**Predict  
the menopausal lipid  
profile change**  
El Khoudary et al, 2016

**Predict  
the new onset of sleep  
disturbance**  
Joffe et al, 2016

**Predict  
the onset of early  
menopause**  
Crawford et al, 2016

**Predict  
the time to Final  
Menstrual period**  
Finkelstein et al, 2016
